

ABSTRACT OF THE DISCLOSURE

A photography system includes a digital camera and a remote control whose location can be detected by the camera. The remote control includes a control for causing the camera to take a photograph. The camera selects a region to photograph from its field of view, based on the location of the remote control. The selected region may include the entire field of view of the camera or a portion thereof. The camera may optionally select a region that places the remote control in the center of the region. The photographer may optionally specify the size of the region to be selected. The camera may optionally adjust the size of the selected region to assist in photographic composition. The camera may optionally be capable of making video recordings.
